In mathematics, a proof is an inferential argument for a mathematical statement. In the argument, other previously established statements, such as theorems, can be used. In principle, a proof can be traced back to self-evident or assumed statements, known as axioms, along with accepted rules of inference. Axioms may be treated as conditions that must be met before the statement applies.

A prime number (or a prime) is a natural number greater than 1 that cannot be formed by multiplying two smaller natural numbers. A natural number greater than 1 that is not prime is called a composite number. For example, 5 is prime because the only ways of writing it as a product,  $1 \times 5$  or  $5 \times 1$ , involve 5 itself. However, 6 is composite because it is the product of two numbers ( $2 \times 3$ ) that ...

La conjecture de Goldbach est l'assertion mathématique non démontrée qui s'énonce comme suit : . Tout nombre entier pair supérieur à 3 peut s'écrire comme la somme de deux nombres premiers.. Formulée en 1742 par Christian Goldbach, c'est un des plus vieux problèmes non résolus de la théorie des nombres et des mathématiques. Il partage avec l'hypothèse de Riemann et la ...

A prime number (or prime integer, often simply called a "prime" for short) is a positive integer that has no positive integer divisors other than 1 and itself. More concisely, a prime number is a positive integer having exactly one positive divisor other than 1, meaning it is a number that cannot be ...

There are many proofs of Fermat's Little Theorem. The first known proof was communicated by Euler in his letter of March 6, 1742 to Goldbach.

There are many unsolved problems in mathematics. Some prominent outstanding unsolved problems (as well as some which are not necessarily so well known) include 1. The Goldbach conjecture. 2. The Riemann hypothesis. 3. The conjecture that there exists a Hadamard matrix for every positive multiple of 4. 4. The twin prime conjecture (i.e., the conjecture that there are an infinite number of twin ...

In matematica, un numero primo (in breve anche primo) è un numero intero positivo che abbia esattamente due divisori distinti. In modo equivalente si può definire come un numero naturale maggiore di 1 che sia divisibile solamente per 1 e per sé stesso; al contrario, un numero maggiore di 1 che abbia più di due

divisori " detto composto. Ad esempio 2, 3 e 5 sono primi mentre 4 e 6 non lo ...

REPENSAR ( R E T H I N K ) is a project which proposes a reflexion around the periphery of Pamplona. It questions the role of culture in these neighbourhoods, the interactions inside of the spaces of the periphery and its relationship to the center.
