chapter 7 cell structure pdf

CHAPTER 2 Protein Structure 31 Side Chains with Polar but Uncharged Groups Six amino acids have side chains with polar groups (FIGURE 2.4). Asparagine and glutamine are amide derivatives of aspartate and glutamate, respectively. Serine, threonine, and tyrosine have side chains with hydroxyl (—OH) groups.

SECTION Protein Structure and Function I

The cell (from Latin *cella*, meaning "small room") is the basic structural, functional, and biological unit of all known living organisms. A cell is the smallest unit of life. Cells are often called the "building blocks of life". The study of cells is called cell biology. Cells consist of cytoplasm enclosed within a membrane, which contains many biomolecules such as proteins and nucleic acids.

DNA is a long polymer made from repeating units called nucleotides. The structure of DNA is dynamic along its length, being capable of coiling into tight loops and other shapes. In all species it is composed of two helical chains, bound to each other by hydrogen bonds. Both chains are coiled around the same axis, and have the same pitch of 34 Å (3.4 nanometres).

DNA - Wikipedia

CELL SHAPE Cells come in a variety of shapes — depending on their function:- The neurones from your toes to your head are long and thin; Blood cells are rounded disks, so that they can flow smoothly.
