In the case of the pipe flow the fluid is enclosed generally by a pressure resistant bound. The pressure head of the fluid can be determined by piezometer. The open channel flow is characterized by a combination from firm and fluid bound. The latter is to be understood as interface between two fluids of different density.

## **Munson, Young and Okiishi's Fundamentals of Fluid**

Fluid mechanics is concerned with the behavior of materials which deform without limit under the influence of shearing forces. Even a very small shearing force will deform a fluid body, but the velocity of the deformation will be correspondingly small. This property serves as the definition of a fluid: the
