The mathematical concept of a Hilbert space, named after David Hilbert, generalizes the notion of Euclidean space. It extends the methods of vector algebra and calculus from the two-dimensional Euclidean plane and three-dimensional space to spaces with any finite or infinite number of dimensions. A Hilbert space is an abstract vector space possessing the structure of an inner product that allows ...

In mathematics, the Hahn-Banach theorem is a central tool in functional analysis. It allows the extension of bounded linear functionals defined on a subspace of some vector space to the whole space, and it also shows that there are "enough" continuous linear functionals defined on every normed vector space to make the study of the dual space "interesting".

Dans un espace de Hilbert de dimension infinie, le concept habituel de base est remplacé par celui de base hilbertienne (ou base de Hilbert) qui permet, non plus de décrire un vecteur par ses coordonnées, mais de l'approcher par une suite infinie de vecteurs ayant chacun des coordonnées finies. On est donc au confluent de l'algèbre linéaire et de la topologie.

Die  $L^p$ -Räume, auch Lebesgue-Räume, sind in der Mathematik spezielle Räume, die aus allen  $p$ -fach integrierbaren Funktionen bestehen. Das  $L$  in der Bezeichnung geht auf den französischen Mathematiker Henri Léon Lebesgue zurück, da diese Räume über das Lebesgue-Integral definiert werden. Im Fall Banachraum-wertiger Funktionen (wie im Folgenden für allgemeines dargestellt) bezeichnet man sie ...

En mathématiques, et plus particulièrement en analyse et en géométrie, le théorème de Hahn-Banach, dû aux deux mathématiciens Hans Hahn [1] et Stefan Banach [2], est un théorème d'existence de prolongements de formes linéaires satisfaisant certaines conditions.. En permettant de prouver abstraitement l'existence de nombreuses fonctions continues, c'est un outil fondamental de l ...

Box and Cox (1964) developed the transformation. Estimation of any Box-Cox parameters is by maximum likelihood. Box and Cox (1964) offered an example in which the data had the form of survival times but the underlying biological structure was of hazard rates, and the transformation identified this.
