The model we created above was saved in "myModel" but no output appeared! The resulting model is a model object now, which we can manipulate using extractor functions. These are functions that will extract the model information and do things with them.

Calling R from Other Software | r4stats.com

Box and Cox (1964) developed the transformation. Estimation of any Box-Cox parameters is by maximum

likelihood. Box and Cox (1964) offered an example in which the data had the form of survival times but the underlying biological structure was of hazard rates, and the transformation identified this.

Machine learning (ML) is the study of algorithms and mathematical models that computer systems use to progressively improve their performance on a specific task. Machine learning algorithms build a mathematical model of sample data, known as "training data", in order to make predictions or decisions without being explicitly programmed to perform the task.
