ULTIMA #53-644 Programmable Digital Ignition System DESCRIPTION The Ultima Digital Ignition is designed to provide the correct curves and total timing for Ultima engines and other larger cubic inch or high performance engines. These units will also replace the OEM HD factory ignition module and sensor used on 1983 and later Harley-Davidson EVO motors.

Internal combustion engines Camshaft. In four-stroke cycle engines and some two-stroke cycle engines, the valve timing is controlled by the camshaft. It can be varied by modifying the camshaft, or it can be varied during engine operation by variable valve timing. It is also affected by the adjustment of the valve mechanism, and particularly by the tappet clearance.

### **Valve timing - Wikipedia**

High energy ignition, also known as H.E.I., is an electronic ignition system designed by the Delco-Remy Division of General Motors, and introduced on some GM vehicles in 1974, including the Camaro Z28 Special High Performance (with 3123 units factory installed). It was used on all engines from 1975 through the mid-1980s. There were many design variations over the years, and provisions for ...

Ignition Control with MegaSquirt II. To provide improved engine performance, better fuel economy, and reduced exhaust emissions, MegaSquirt II can control spark advance (timing), and this advance is programmable by the user.. For MegaSquirt II (as for most other ignition systems), the total ignition advance is based on three factors: . Total advance = initial advance + RPM based advance ...

The performance of a spark ignition engine is investigated under different values of ignition advance. A two-zone burnt/unburned model with the fuel burning rate described by a Wiebe function is used for modeling in-cylinder combustion, and then experiments are carried out to validate the calculated data. By varying the ignition timing, the results of some characteristics such as power, torque ...

Understanding Multi-Coil Ignition Systems Download PDF. Distributorless Ignition Systems (DIS) have been around for more than two decades, but in recent years the trend has been to multi-coil systems such as Coil-On-Plug (COP) or Coil-Per-Cylinder (CPC) ignition systems, and Coil-Near-Plug (CNP) ignition systems.
