An internal combustion engine (ICE) is a heat engine where the combustion of a fuel occurs with an oxidizer (usually air) in a combustion chamber that is an integral part of the working fluid flow circuit. In an internal combustion engine, the expansion of the high-temperature and high-pressure gases produced by combustion applies direct force to some component of the engine.

People are always asking for info on swapping TDI motors. I would like to provide a link to the threads where the swaps have been performed or discussed at depth that would give substantial knowledge of what is

involved.
